

WHITE PAPER

ABSTRACT

REOKS is a BEP-20 Token project that focuses on environmentalism and sustainability principles. Our primary goal is to increase environmental awareness within the community and promote sustainable living. In line with this, we believe that small steps can lead to significant changes, striving to leave a greener world for future generations with our creative ideas. Through our innovative reverse vending machines and, we actively combat waste issues, reduce environmental pollution, and preserve our natural resources.

REOKS Store, which includes filaments produced from recycled plastic bottles, creative products made from these filaments and much more, makes a significant contribution to the economy. In addition, REOKS Forum, which can be accessed through our website, serves as a platform for discussions on ecological problems and practical solutions to these problems. The most popular solutions among users on the forum are rewarded with REOKS Tokens. This approach aims to create greater awareness and encourage participation within the community by rewarding contributions made in the field of sustainability.

The REOKS mobile application, which works in integration with our vending machines called Reomate, allows users to carry out recycling transactions in a practical way. In addition, users can check the amount of REOKS Tokens obtained from their recycling transactions and access current news on environmentalism.

Dividium, the first game of REOKS Games, is a mobile strategy game that appeals to all gamers. Our players have the opportunity to use the REOKS Tokens they earn by achieving success in tournaments held at regular intervals to accelerate their progress in the game or store them in their wallets for investment purposes.

1. Introduction

Our world is facing serious problems that threaten our future, especially climate change and raw material shortages caused by unconscious and excessive consumption. To tackle these problems, we have developed an ecosystem that encourages and rewards our users for reducing their carbon footprint. Our goal is to restore our world to health through our recycling efforts and awareness raising.

1.1. Global Issues

Due to various reasons such as the expanding global population, irresponsible consumption of limited resources, and inadequate recycling, our world is facing increasing destruction every day. If these issues are not addressed, the planet we leave for future generations will be unable to renew itself, making it progressively challenging to maintain a livable environment.

Ecological problems result from a multitude of factors that impact living organisms and the natural cycle of the Earth. The most common of these problems include:

- 1. Global Warming:** The rise in carbon dioxide and other greenhouse gases in the atmosphere leads to global warming, causing the melting of glaciers and a subsequent rise in sea levels. Scientists estimate that by 2100, sea levels could rise between 0.26 and 0.77 meters higher than in the early 1900s, posing a direct threat to people living in coastal areas.
- 2. Biodiversity Loss:** Scientists estimate that one million species could be at risk of extinction in the next 30 years if current trends persist. Forest areas are expected to lose more than 15% of their current levels by 2030.
- 3. Waste Problem:** Increased greenhouse gas emissions associated with the mismanagement and disposal of waste could accelerate climate change. According to current trends, waste mishandling could result in the emission of an average of 800 million tons of greenhouse gases per year by 2030.

1.2. Solutions

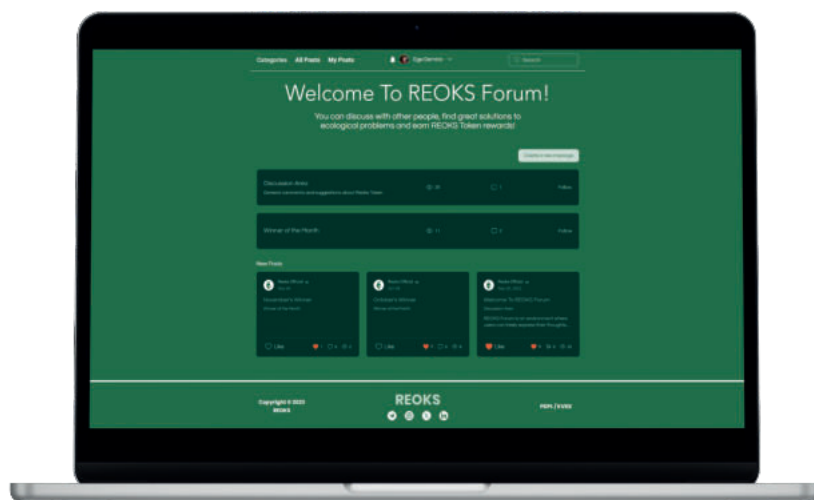

We acknowledge that the wounds caused by ecological problems, which have been overlooked for years, have deepened over time. To address these issues, we have implemented various innovative projects. Our goals include raising public awareness through the REOKS Forum, enhancing the practicality of recycling processes with Reomates and the REOKS mobile application, and reintroducing waste into the economy by offering environmentally friendly products for sale at the REOKS Store.

In addition to these initiatives, we are committed to increasing public awareness through environmental events organized in collaboration with our partner organizations and the creation of NFT collections.

1.2.1. REOKS Forum

REOKS Forum serves as a platform where environmentally and socially responsible individuals converge. Our primary objective is to foster interaction among users and generate innovative solutions to ecological problems. Members who contribute the most effective solutions to these issues are rewarded with REOKS Tokens, recognizing and celebrating their accomplishments. These suggestions undergo careful evaluation by our team and are implemented, allowing users not only to contribute to securing our future but also to earn rewarding incentives.

The moderation of REOKS Forum is overseen by our team of expert moderators. They swiftly and effectively intervene in disputes between users, ensuring a peaceful environment is maintained.

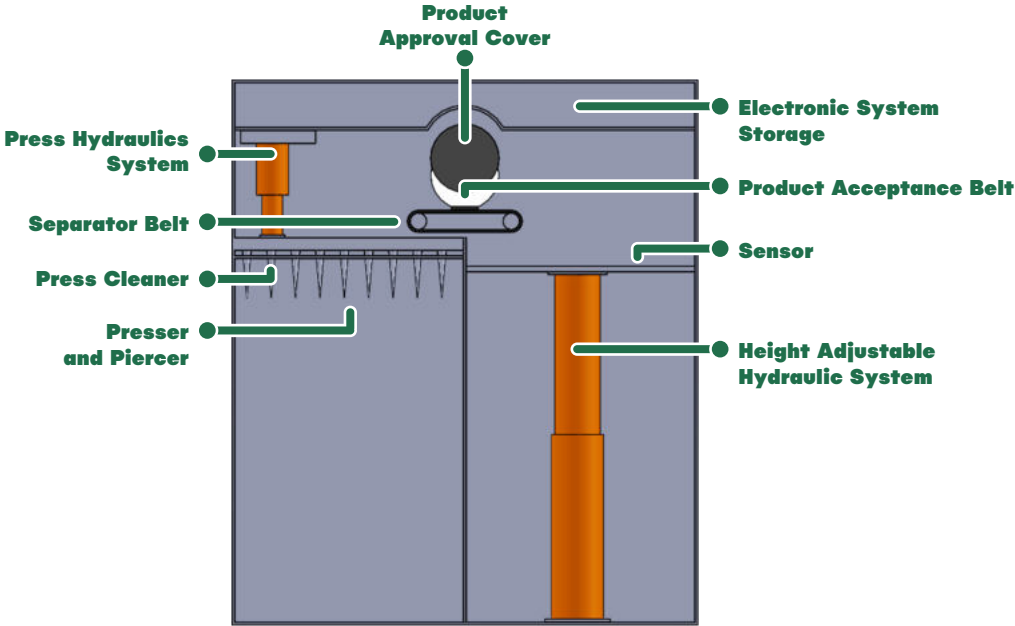

1.2.2. Reomate

Reomate is a pivotal component within our ecosystem, representing the generic name for our vending machines that adhere to high safety standards. These machines are strategically placed in particularly busy areas. Thanks to our vending machines, recycling processes have become exceptionally practical. Upon scanning the QR code displayed on the screen, the vending machine hopper opens, allowing users to deposit their plastic, glass bottles or cans. Subsequent to this step, the transaction is completed, and the calculated amount of REOKS Token is automatically transferred to the user's wallet.

Within Reomate, bottles are classified according to their types and directed to different hoppers. During this stage, plastic bottles and cans undergo a pressing process, enabling our automation systems to operate efficiently for extended periods without needing to be emptied. Glasses and cans collected during the operation process are sent to recycling facilities where they are recycled and reused. Plastic bottles processed by us are transformed into high-quality filaments. These resulting filaments are then utilized in the production of products available at the REOKS Store.

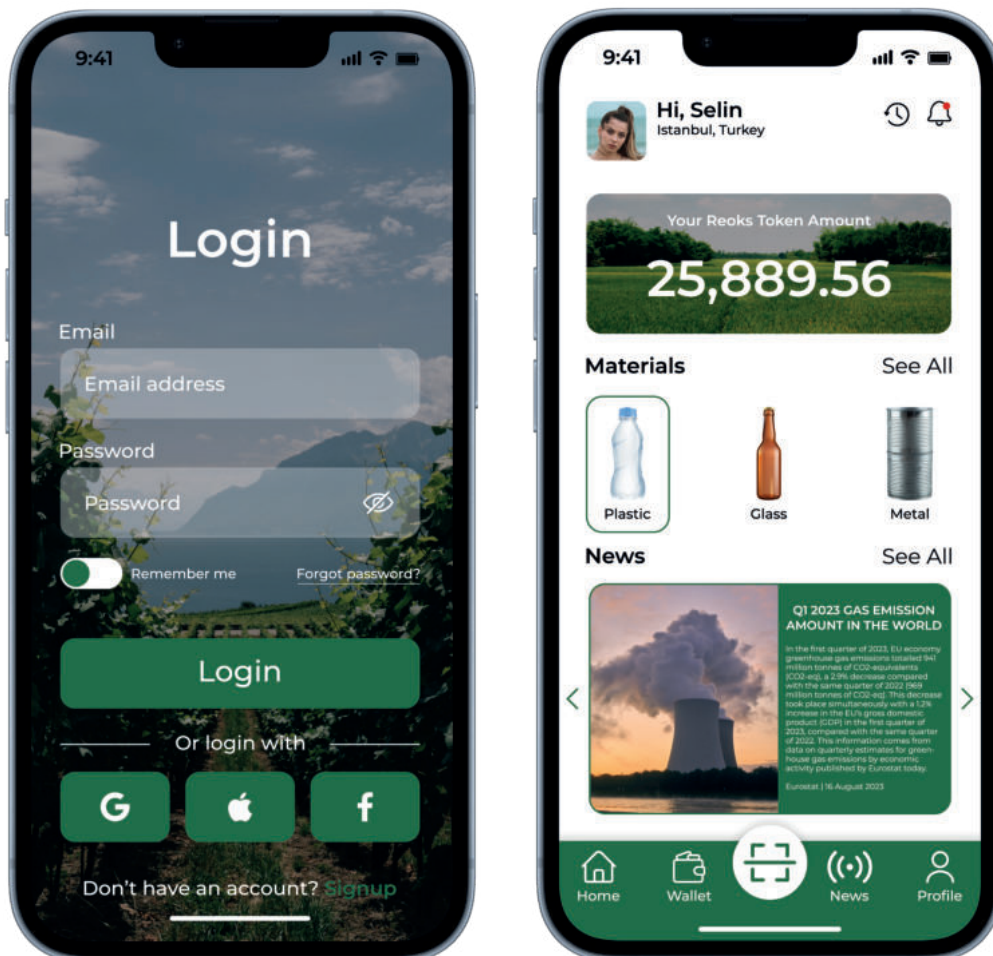

Moreover, the Golden Bottle prize, awarded randomly to one of the recycling transactions every week, provides the opportunity to increase the earnings of the fortunate user up to 100 times.

1.2.3. REOKS App

REOKS mobile application aims to contribute to the adoption of an environmentally friendly lifestyle. Using our app, our users can complete their recycling transactions through Reomates in a practical way. They can also view the location of the nearest Reomate in their area, review the number of bottles they have recycled so far, access up-to-date ecological news and check the amount of REOKS Tokens in their wallet.

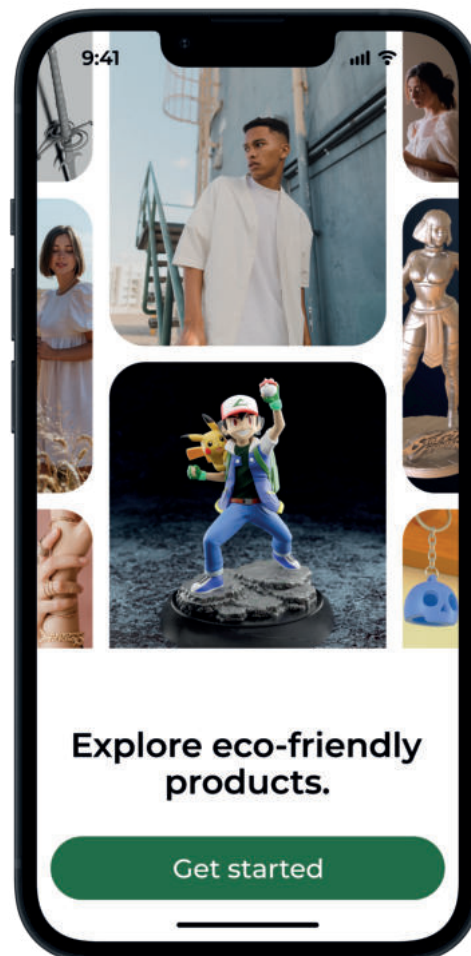

There is also a ranking menu on our homepage. Every month, users who rank high on the leaderboard are rewarded with REOKS Tokens. This competitive system allows us to create an environmental incentive by rewarding our users.

1.2.4 REOKS Store

REOKS Store has a wide range of products manufactured using filaments obtained by recycling plastic bottles and various other recycled materials. This careful production process not only protects the environment, but also offers users a budget-friendly shopping experience by offering high quality products at affordable prices.

REOKS Store adopts an environmentally friendly approach by reusing waste and using sustainable materials. In this way, it makes a significant contribution to the protection of natural resources and the reduction of waste. REOKS Store, which adopts the principles of environmentalism and economic usability and is a pioneer in its field, aims to meet the needs in a sustainable way.

2. REOKS Games

REOKS Games makes a great effort to reduce carbon footprint by encouraging the use of details that can create environmental awareness within the game. Our team provides an exemplary model for the industry by managing the game development process with an environmental awareness. As a result of these efforts, fun games are produced and important steps are taken to protect natural resources and reduce waste.

2.1. Dividium

Over the years, natural resources have been almost completely depleted as a result of the unconscious misjudgments of rulers and the insensitivity of societies to ecological problems. This situation has brought humanity to a critical period that has led to the end of life. Those who survived this difficult process decided to unite under the roof of a single civilization. However, after years of unity and peace, a struggle for the throne between the three leaders led to the kingdom's disintegration and division into three different regions.

Choose your side in this new world order, dominate your opponents in battle and fly your flag proudly. Use the loot to develop your civilization, gain a strategic advantage over your enemies, and participate in various tournaments to earn REOKS Tokens.

3. NFT Collections

We aimed to raise awareness of ecological problems by creating various NFT collections such as endangered species, recyclable materials, etc. The proceeds from the sale of the NFTs in these special collections are fully directed to financing important activities such as reforestation, environmental cleanup and similar important activities. In this way, our investors who own NFT pieces not only own a valuable work of art, but also support this important fight for the protection of the earth.

4. TOKENOMICS

REOKS has a fixed supply of 1,000,000,000 tokens, which will be allocated.

GROUP	% ALLOCATION	REOKS ALLOCATION	VESTING PERIOD	REOKS ALLOCATION
PUBLIC SALE	25	250,000,000	%19 TGE	%9 MONTHLY
LIQUIDITY	15	150,000,000	%10 TGE	%9 MONTHLY
MARKETING	7	70,000,000	-	-
AIRDROP	3	30,000,000	-	-
TEAM	15	150,000,000	3 MONTHS CLIFF	%20 MONTHLY
REWARDS	35	350,000,000	-	-

TOE: Token Generation Event

5. ROADMAP

Q4 2023

Reomate Prototype
Website
REOKS Forum

Q1 2024

Token Presale
Contract Audit
Launching
Phase 1 Airdrop Distribution
NFT Collections

Q2 2024

REOKS App Launch
Partnerships
Phase 2 Airdrop Distribution

Q3 2024

Dividium Alfa Version
REOKS Store Opening
Awareness Organizations
Phase 3 Airdrop Distribution

Q4 2024

Dividium Beta Version
Reomate Settlements
